

CIRCULATION AND FLOW HEATERS:

These heaters are designed and manufactured as per customers' requirements. According to the type of liquid to be heated, the material of the tube shell can be made of AISI 316L, S31803 duplex stainless steel or CuNiFe and electric heating elements are made of Incoloy and AISI 316L. The required heating powers ranging between 10 to 300 kW are determined according to the demanded flow rates.
